

View Images Directly Within Your Practice Management Software

Access your patients' radiology images directly within your practice management software. This streamlined integration makes it quick and easy to review images, saving time and helping you provide timely, efficient patient care.

If you are registered to receive electronic reports via EDI, a **secure, login-free image URL** will be delivered with each radiology report, allowing you to access your patient's images directly from your practice management software.

Note: If your practice management software does not support embedded hyperlinks, simply open your patient's radiology report, click the image URL displayed at the bottom of the report, and the associated images will automatically open in the IntelConnect EV image viewer.
